

Fit for Sustainable Supply Chain in Europe

A holistic and practical approach to how purchasing can systematically integrate sustainability into its strategies and practices

IPG Masterclass

Sustainable Procurement

G6 – NH Tool Guide

IPG PARTNERS GROUP

Tuesday, February 10th
Day 1 – Morning: Module 5

09:00 –
12:00

1 **Fit for Sustainable Supply Chain in Europe**
– welcome & introduction

09:00 –
09:15

2 **Module 5 - introduction**
SUS supply chain analysis –
5-phase methodology

09:15 –
10:45

10:45 - 11:00 

3 **M5 - Sprint** 

SUS supply chain analysis –
Team SaraCook & Team BosnaCool

11:00 –
12:00

Tuesday, February 10th
Day 1 – Afternoon: Module 6

13:00 –
17:00

4 **Module 5 - Sprint review**
Team Presentations –
Team SaraCook & Team BosnaCool

13:00 –
13:45

5 **M6 - introduction**
ToolMap Taxonomy and Tool introduction

13:45 –
14:45

14:45 –15:00 

6 **M6 - Sprint** 

Tool prioritization & selection –
Team SaraCook & Team BosnaCool

15:00 –
16:00

7 **M6 – Sprint review**
Team Presentations –
Team SaraCook & Team BosnaCool
Wrap-up Day 1 & Outlook Day 2

16:00 –
17:00

Questions & comments

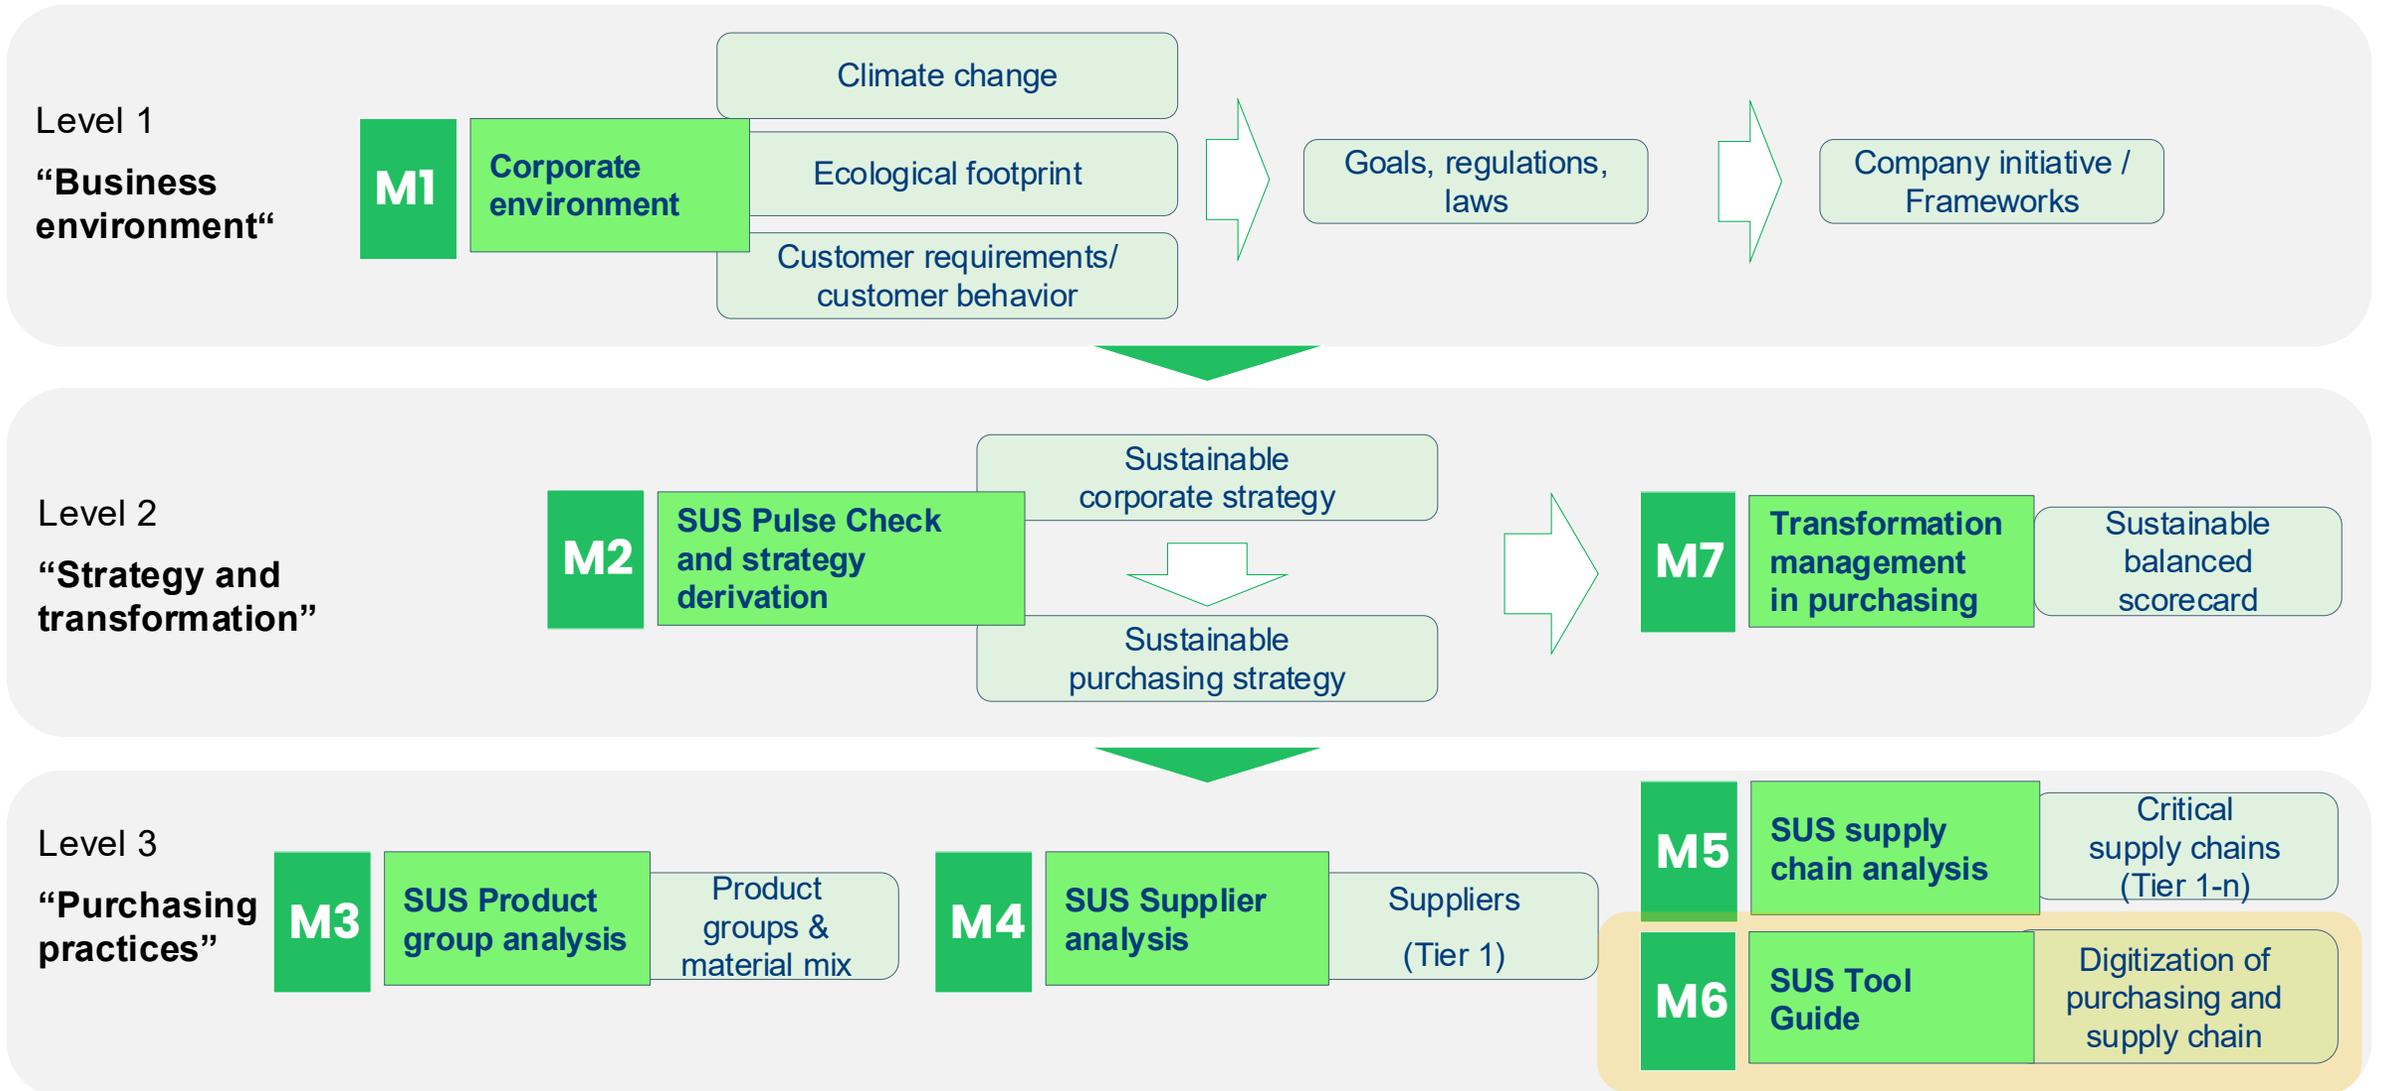

Coffee break

All times given are indicative and may vary.

Module interfaces | IPG’s sustainable procurement excellence training systematically addresses important interfaces between corporate level and purchasing practices

Tool Guide for Sustainability in Procurement and Supply Chain

Role models in digital procurement | Six roles shape the future of procurement

BUSINESS INNOVATION INTEGRATING THE RIGHT PARTNERS

"Agile"

Procurement as a service-oriented business model

- › Central hub for **insights and forecasts**
- › Sees itself as an **internal service provider** that offers its customers its customers **efficient, digital new services**
- › **Prediction**
- › **Process tracking**
- › **Training courses**
- › **Plug & Play** upon purchase
- › **Services for third parties**

EFFICIENCY DOING THINGS RIGHT

Lean

Category efficiency leader

- › **Cross-functional expense management** on a digital platform
- › **Collaboration** with relevant departments
- › Consideration of procurement aspects in **early development phases**
- › Develop **flexible models** for **cost-conscious design** in real time
- › **business scenarios** for **ad hoc minimization of component and material complexity**

EFFECTIVENESS DOING THE RIGHT THINGS

"Connected"

Lifecycle sustainability manager

- › Combines future **environmental and regulatory requirements** with its **knowledge of the supply network**
- › Integrates **sustainability into category strategies and procurement processes**
- › Takes responsibility for **assessing the sustainability risks** of suppliers and supply chains
- › Develops **cost-benefit analyses** for sustainable alternatives

Innovation partner manager

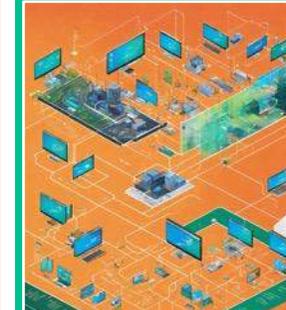

- › Identification and evaluation of **external trends, ideas, and innovations**
- › Develops product and **service innovations in cross-functional teams**
- › Establishment of a **cross-innovation ecosystem** and bringing together **innovative start-ups** with relevant investors
- › Promotes the **development of new partnerships** with selected strategic suppliers/partners

Transactional champion

- › **Focus on P2P as a fully automated process** through digital technology and **replacement of human labor** (order processing, requesting goods and DL, validating material receipts, paying invoices, etc.)
- › Use of AI for **data generation and analysis in transactions**
- › Establishing AI tools as **digital assistants** to **transfer human interaction into routines** with minimal time expenditure

Supplier & supply chain tower

- › Establish **stable and efficient supplier relationships**
- › Has a coherent and integrated understanding of **vertical and horizontal value chains**
- › Creates transparency **across Tier 1 suppliers along the supply chain**
- › Development of an early warning system through **resilient network design and proactive risk management**.
- › Brings together partners in a value chain on a **digital platform**
- › Uses AI for **advanced supply chain analytics**

Effectiveness

Lifecycle Sustainability Manager

- › Combines future **environmental and regulatory requirements** with his **knowledge of the supply network**
- › Integrates **sustainability into category strategies** and **procurement processes**
- › Takes responsibility for **assessing the sustainability risks** of suppliers and supply chains
- › Develops **cost-benefit analyses** for sustainable alternatives

Digital tools

Practical examples

Digital purchasing tools | Digitalization enables the implementation of completely different digital (AI) use cases and tools for every purchasing role

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

What sets sustainability leaders apart | Sustainability leaders develop clear sustainability advantages through digitalization and innovation

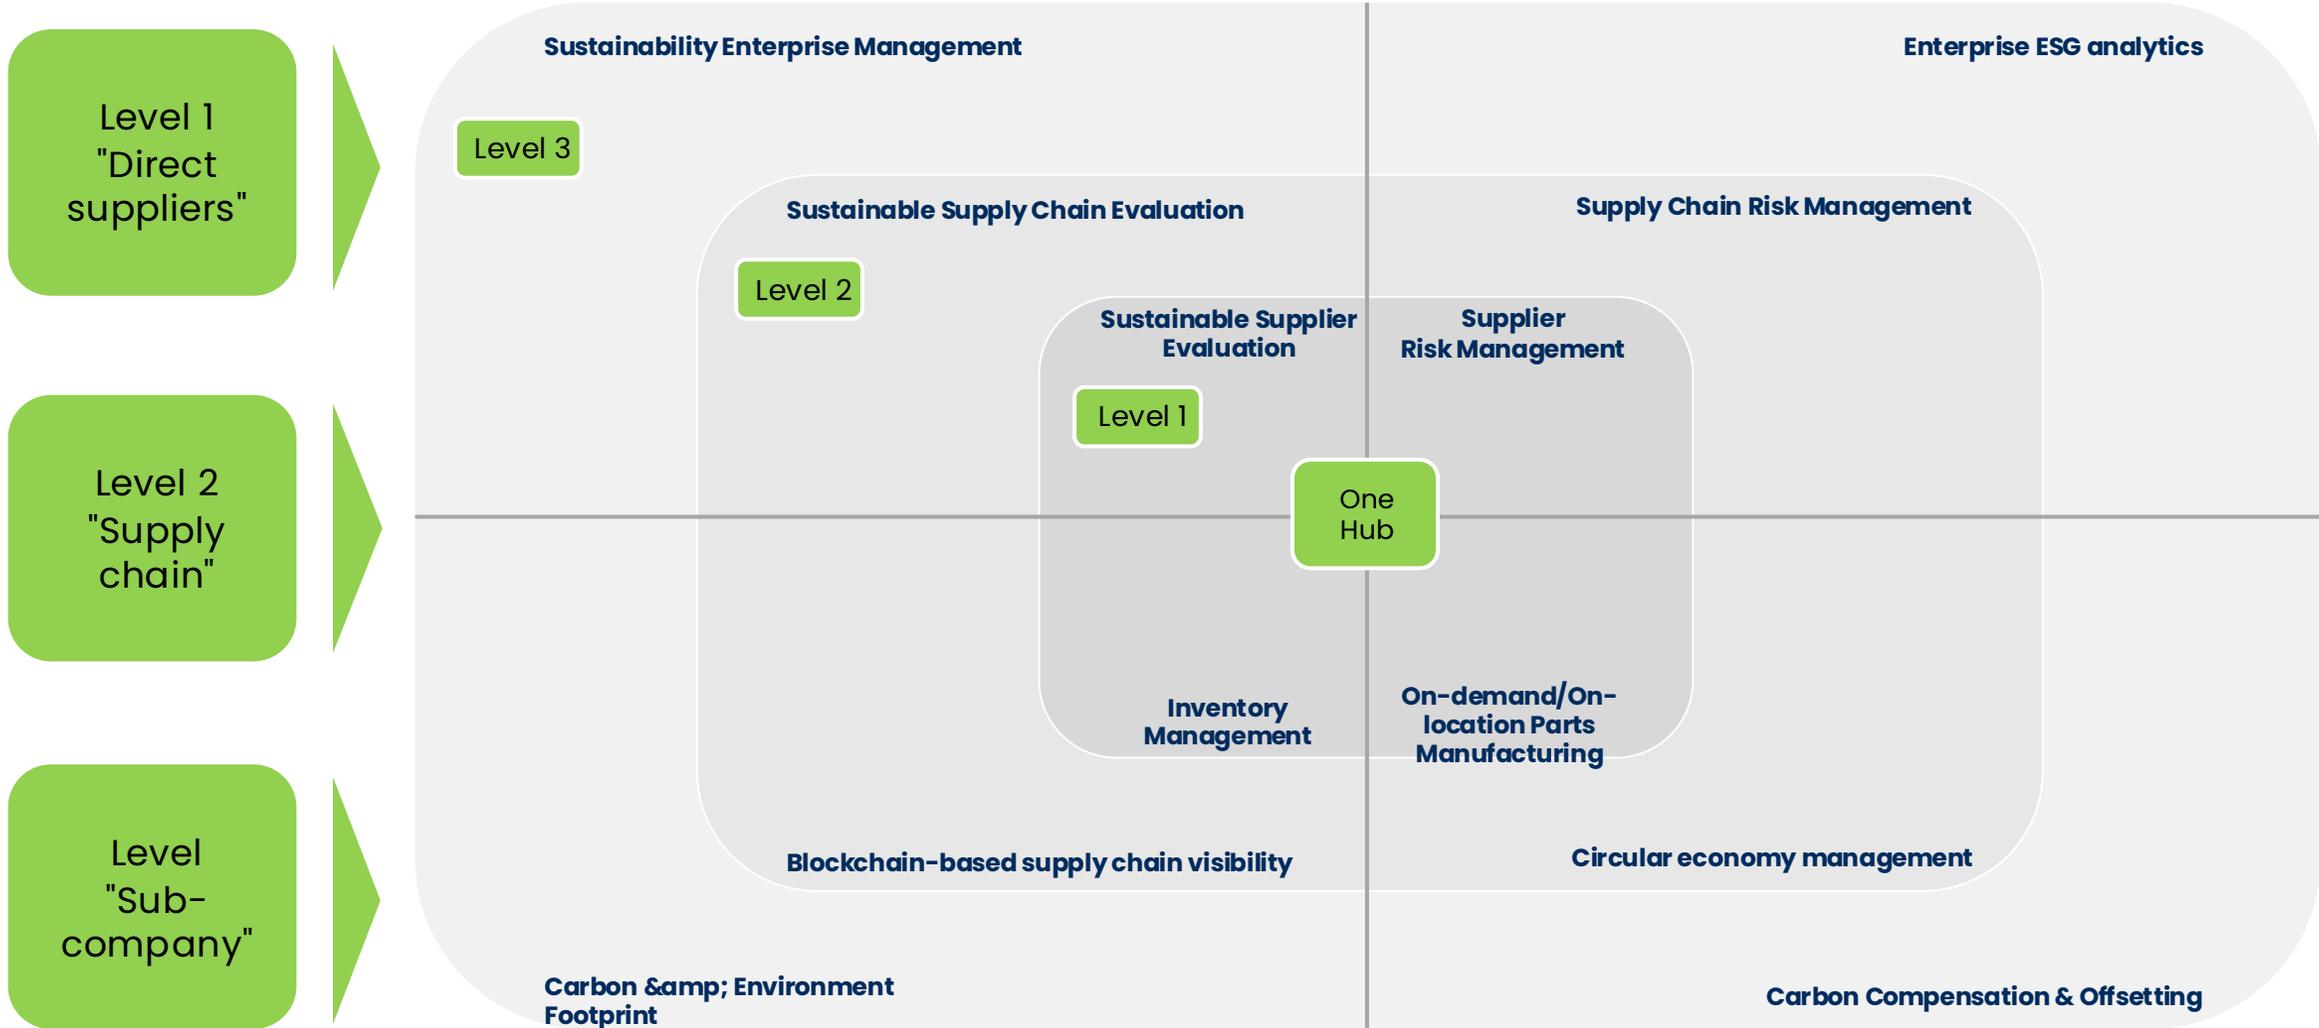

Characteristics of sustainability leaders in purchasing

- › **Priority:** Since achieving sustainability goals is very important to these companies, they are also **willing to invest more in sustainable procurement** and improving supply chain transparency
- › **Holistic:** Executives take a **more holistic** view of sustainability, i.e., as **an integral part** of their supply chain management
- › **Tools:** They are able to use a **broader range of tools** for sustainable procurement

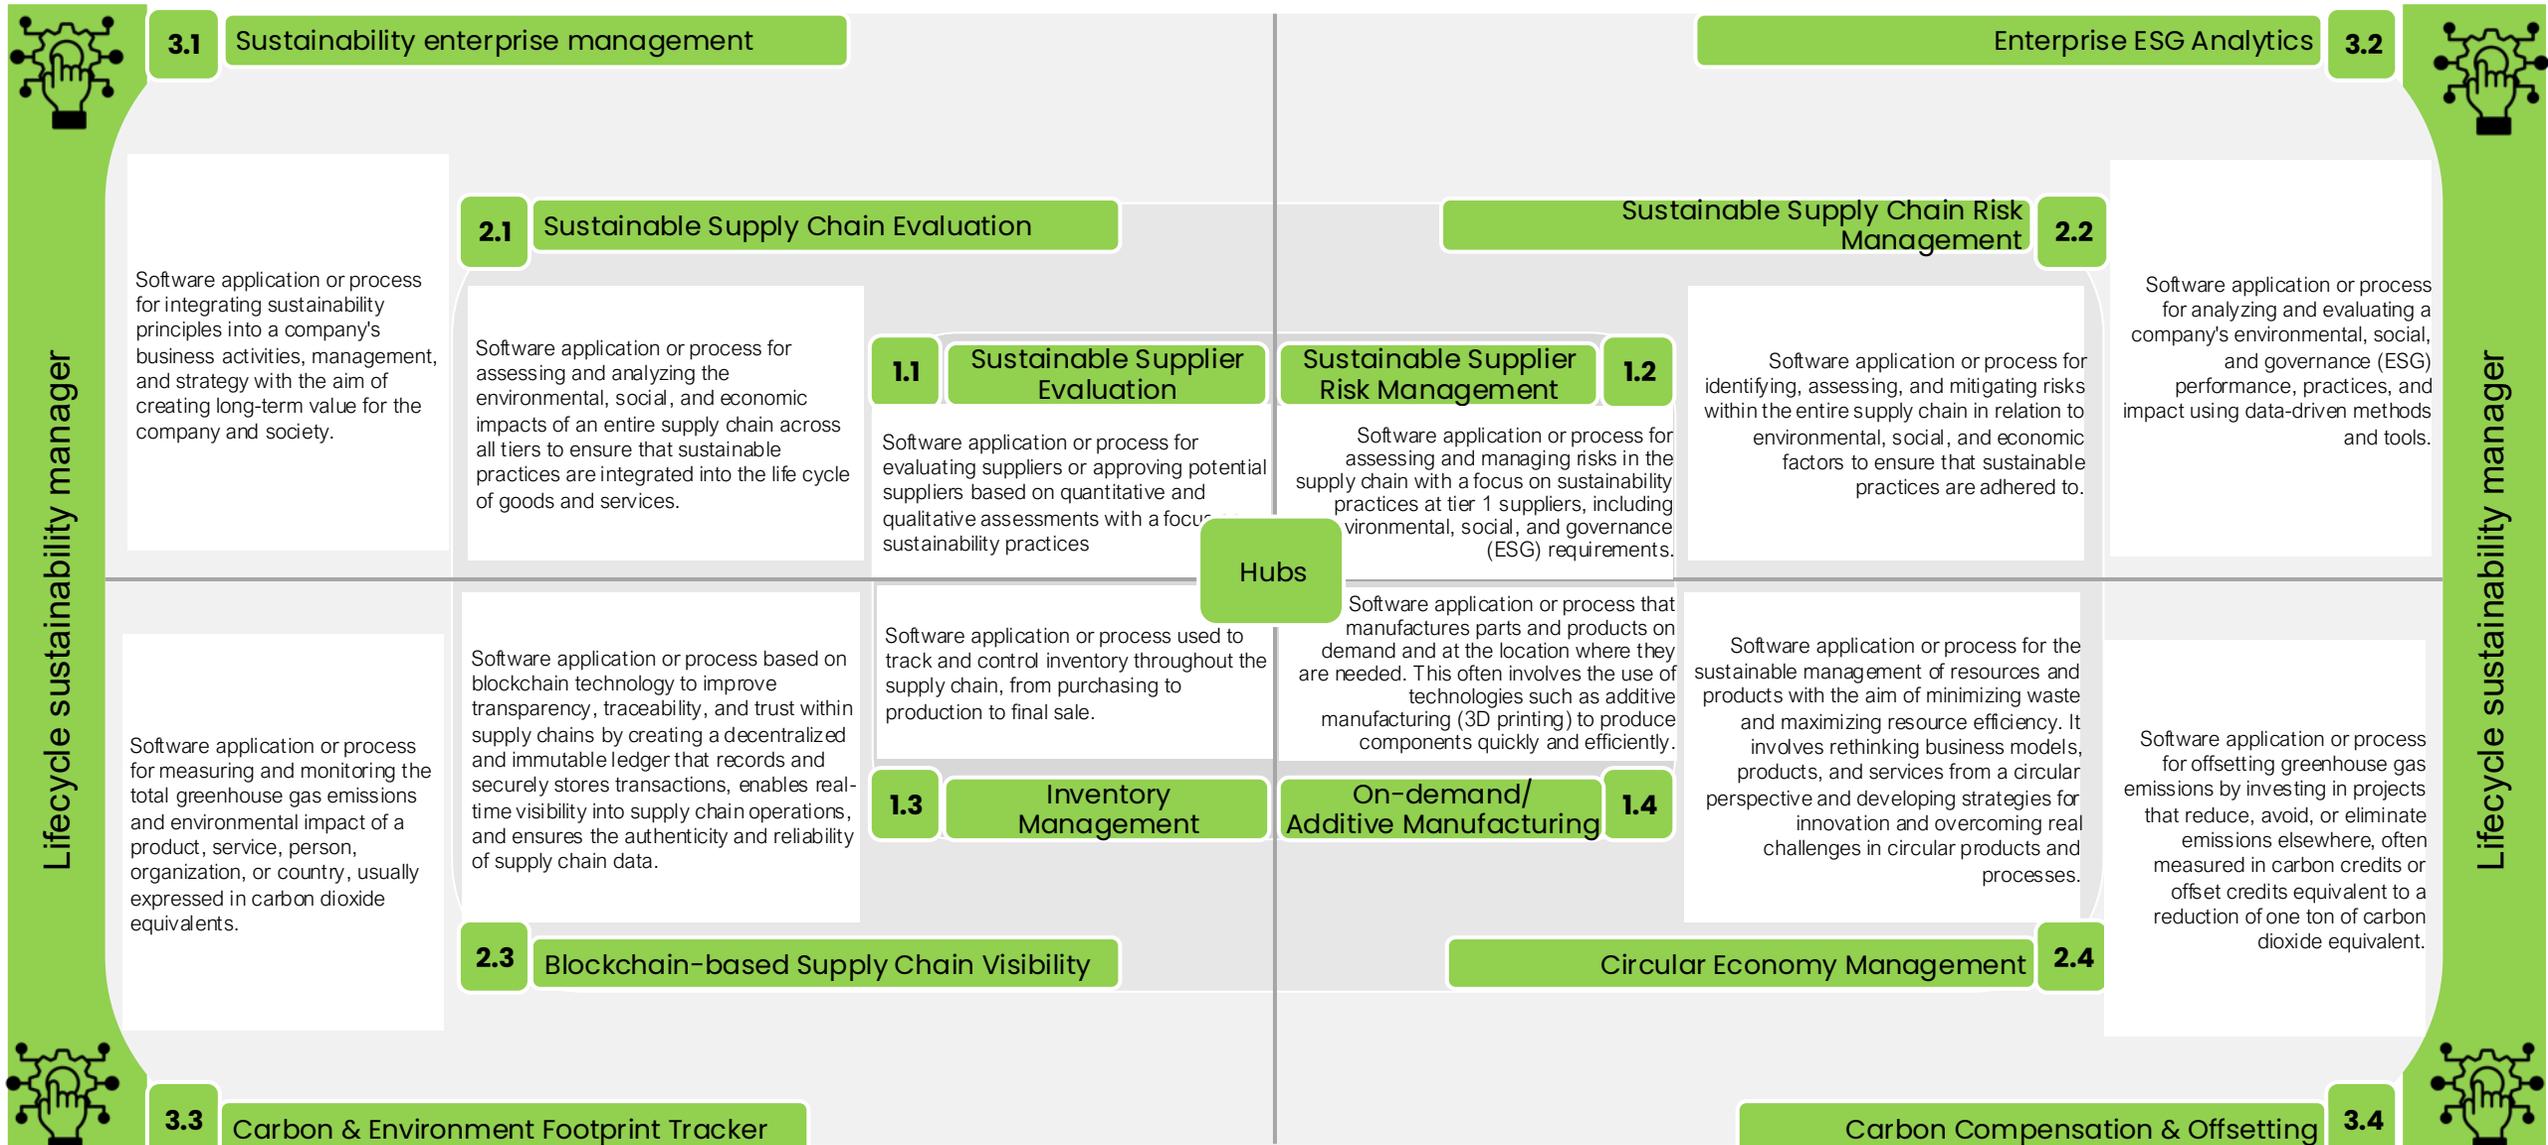

% Share of sustainability leaders: Share of companies that can be considered leaders in sustainability

IPG DIGITAL TOOL MAP | IPG distinguishes between 12 different tool clusters for sustainability in purchasing and SCM

IPG DIGITAL TOOL MAP | Twelve digital solution spaces shape the "Lifecycle Sustainability Manager"

IPG DIGITAL TOOL MAP | The number of digital tools for lifecycle sustainability managers is growing rapidly – there are currently over 150 solution providers.

Status Sep. 2025

IPG DIGITAL TOOL MAP | Taxonomy - Lifecycle Sustainability Manager – use cases Level 1

Sustainable Supplier Evaluation (assess status)

1.1

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Sample description

- › Improving the planning, execution, and quality control of sustainability issues in the supply chain depends on **monitoring and optimizing supplier performance**, which is difficult but necessary.
- › To assess **suppliers' sustainability performance** and optimize communication with them, companies need reliable **supplier assessment software**.
- › With the help of supplier assessment forms and **supplier scorecards**, companies can get the most out of their supplier performance management.

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. Sustainable Supplier Risk Management
3. Inventory Management
4. On-demand/On-location Parts Manufacturing
5. Sustainable Supply Chain Evaluation
6. Sustainable Supply Chain Risk Management
7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples

Focus

- › Enhanced **control and monitoring** of those involved in the supply chain (focus on Tier 1 level).

Advantages

- › Rapid **identification of reputation risks** posed by suppliers
- › **Suppliers take responsibility** for their own performance and activities, as partnerships are established within a transparent framework
- › **Provision of catalogs of measures** to combat bribery and corruption and to ensure information security

Sustainable Supplier Risk Management (Tier 1 level) – Collaboration

1.2

Sample description

- › Digital solutions for **identifying, assessing, and managing risks associated with direct suppliers (Tier 1)**, particularly with regard to environmental, social, and regulatory requirements (ESG).
- › Digital solutions enable **potential sustainability risks to be identified at an early stage and systematically minimized**.
- › The software enables **ongoing monitoring of supplier risks**, provides real-time risk analysis, and supports the implementation of measures to improve sustainability performance.

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. **Sustainable Supplier Risk Management**
3. Inventory Management
4. On-demand/On-location Parts Manufacturing
5. Sustainable Supply Chain Evaluation
6. Sustainable Supply Chain Risk Management
7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Focus:

- › **Identification and mitigation of procurement risks**

Advantages:

- › Reduction of sustainability and reputational risks
- › Improved compliance with regulatory requirements
- › More efficient use of resources through risk-based supplier management

Inventory Management

1.3

Sample description

- › An **inventory management system** helps all types of companies automate their inventory processes, work efficiently, and increase their profits.
- › **Inventory optimization, in the sense of minimizing inventory** through the use of virtual warehouses, etc., along the supply chain also **supports sustainability goals (including obsolescence and associated waste)**.
- › Inventory management involves tracking incoming and outgoing products and deliveries.
- › Inventory management software **automates the process of tracking, reordering, and updating inventory**. It can be integrated into relevant business systems such as POS systems and accounting software. This allows all inventory-related processes to be streamlined.

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. Sustainable Supplier Risk Management
3. **Inventory Management**
4. On-demand/On-location Parts Manufacturing
5. Sustainable Supply Chain Evaluation
6. Sustainable Supply Chain Risk Management
7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Focus:

- › Optimization of inventory levels
- › Inventory listing and inventory management **along the procurement value chain**

Advantages

- › **End-to-end transparency** of inventory along the entire value chain
- › Simplified inventory management
- › Accurate planning and inventory reconciliation
- › Warehouse organization and employee efficiency

On-demand/on-location parts manufacturing

1.4

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulatorianforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt **Kosten-Nutzen-Analysen** für nachhaltige Alternativen

Sample description

- › **On-demand manufacturing is** not about producing parts with large minimum order quantities and storing these goods in a warehouse, but rather about **producing only what customers need** when they need it ("on demand").
- › By using an **on-demand platform**, buyers can **avoid the costs of setting up a supply chain for a new product**, as the platform automatically manages this process, reducing internal costs and the number of employees.
- › The additive manufacturing process **drastically reduces material consumption** in the manufacturing process.
- › Purchasers can **minimize their inventories** and thus also **pursue sustainability goals**.

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. Sustainable Supplier Risk Management
3. Inventory Management
4. **On-demand/On-location Parts Manufacturing**
5. Sustainable Supply Chain Evaluation
6. Sustainable Supply Chain Risk Management
7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Focus:

- › 3D printing of spare parts on site or nearby

Advantages

- › Fast, single-step production
- › Customization (more design freedom)
- › Reduced inventory
- › Cost reduction (lower machine, material, and labor costs)

IPG DIGITAL TOOL MAP | Taxonomy - Lifecycle Sustainability Manager – use cases Level 2

Sustainable Supply Chain Evaluation (status mapping)

2.1

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Sample description

- › The software for **assessing sustainability in the supply chain** enables companies to make decisions throughout the entire supply chain.
- › It enables them **to track the sustainability risks of suppliers and sub-suppliers.**
- › Through the platform, they can **determine whether their suppliers are implementing measures to address sustainability issues.**
- › It is an intuitive, **secure platform used by sustainability officers and supply chain managers.**

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. Sustainable Supplier Risk Management
3. Inventory Management
4. On-demand/On-location Parts Manufacturing
5. **Sustainable Supply Chain Evaluation**
6. Sustainable Supply Chain Risk Management
7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Focus

- › Companies are informed about the **origin of all components of the product.**

Advantages:

- › **Knowledge of the origin of all materials and components used in the product**
- › Green marketing based on social responsibility
- › Monitoring supplier diversity and compliance with social standards
- › Partial carbon footprinting and measurement of Scope 3 emissions

Case study

- › CaixaBank, one of Spain's largest banks, is working with Achilles to improve ESG criteria in its supply chain
- › <https://www.achilles.com/industry-insights/caixabank-is-improving-suppliers-esg-credentials-using-achilles/>

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

Sustainable supply chain risk management (collaboration at Tier n level)

2.2

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Sample description

- Modern risk management solutions in purchasing help companies identify, assess, and manage **risks in the supplier and procurement environment** at an early stage.
- They provide transparency on **financial, operational, regulatory, geopolitical, and ESG risks** and enable strategic risk hedging.
- **TPRM** is integrated throughout the entire process to identify, monitor, and manage risks at an early stage.
- Risk management is not a module, but a **continuous control system in the S2P process**, ideally supported by automated, data-driven tools.
- It increases **resilience**, ensures **compliance**, and **protects reputation and business continuity**.

IPG ToolMap

Lifecycle sustainability manager

1. Sustainable Supplier Evaluation
2. Sustainable Supplier Risk Management
3. Inventory Management
4. On-demand/On-location Parts Manufacturing

7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

Examples:    

Advantages:

- › **Transparency** of risks across the entire supply chain (including sub-tier suppliers)
- › **Early warning system** for geopolitical, financial, operational, and ESG risks
- › **Compliance security** through automatic monitoring of regulatory requirements
- › **Increased efficiency** through a central platform for risk identification, assessment, and monitoring
- › **Supply continuity** through timely detection of disruptions and bottlenecks
- › **Reputation protection** by avoiding scandals and negative headlines
- › **Better basis** for decision-making in supplier selection, evaluation, and development

Supplier Relationship Management (SRM) | Use cases in detail

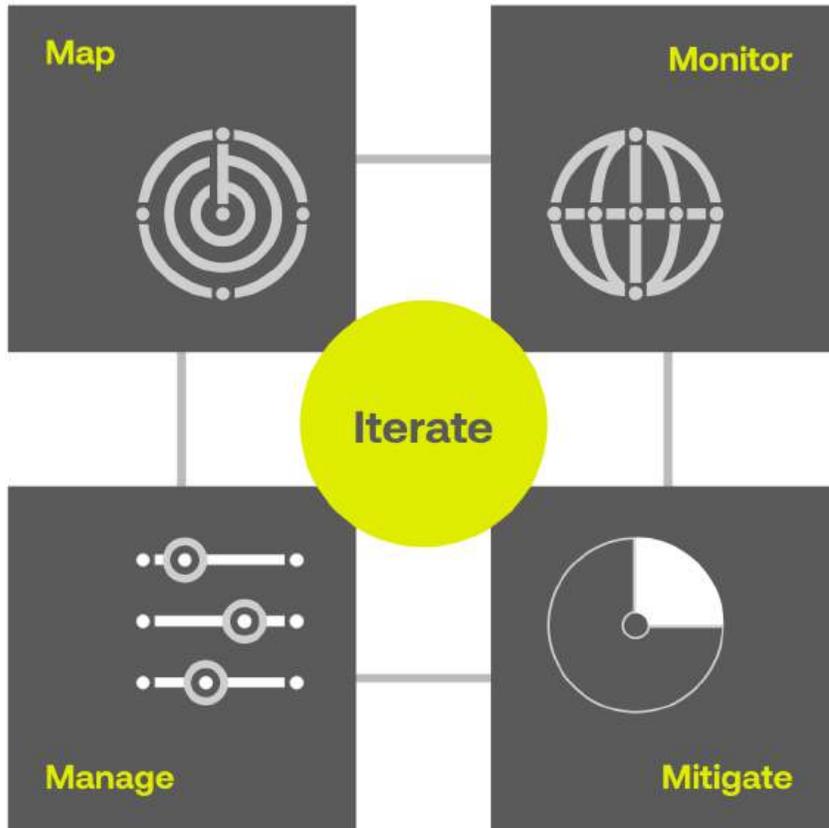

Monitoring of risks, regulatory requirements, and third-party risks in the supply chain

Prewave | Supply Chain Risk Management

Figure 1:
Genpact's Supply Chain Risk and Resiliency Management Framework to meet CSDDD compliance

Map:

Mapping of supplier site locations to understand the flow of materials across the supply chain. This includes Tier-N mapping for key suppliers, components, and materials, enabling full visibility of critical nodes in the supply chain.

Monitor:

Ongoing supply chain monitoring connects supplier site locations to risks based on geography or industry, as well as specific events that impact individual locations.

Manage:

Establishing an effective and robust operating model integrates risk and compliance data into decision making platforms and processes across supply chain functions.

Mitigate:

Proactive and reactive actions that connect risk and compliance triggered from Prewave events to tangible impacts on the supply chain and are considered in scenario planning.

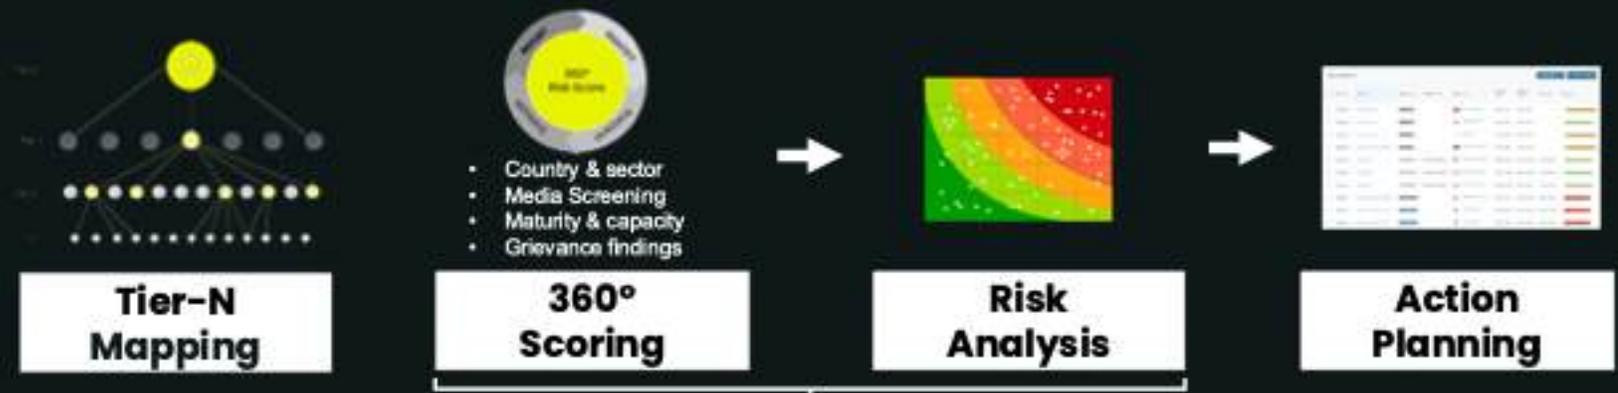

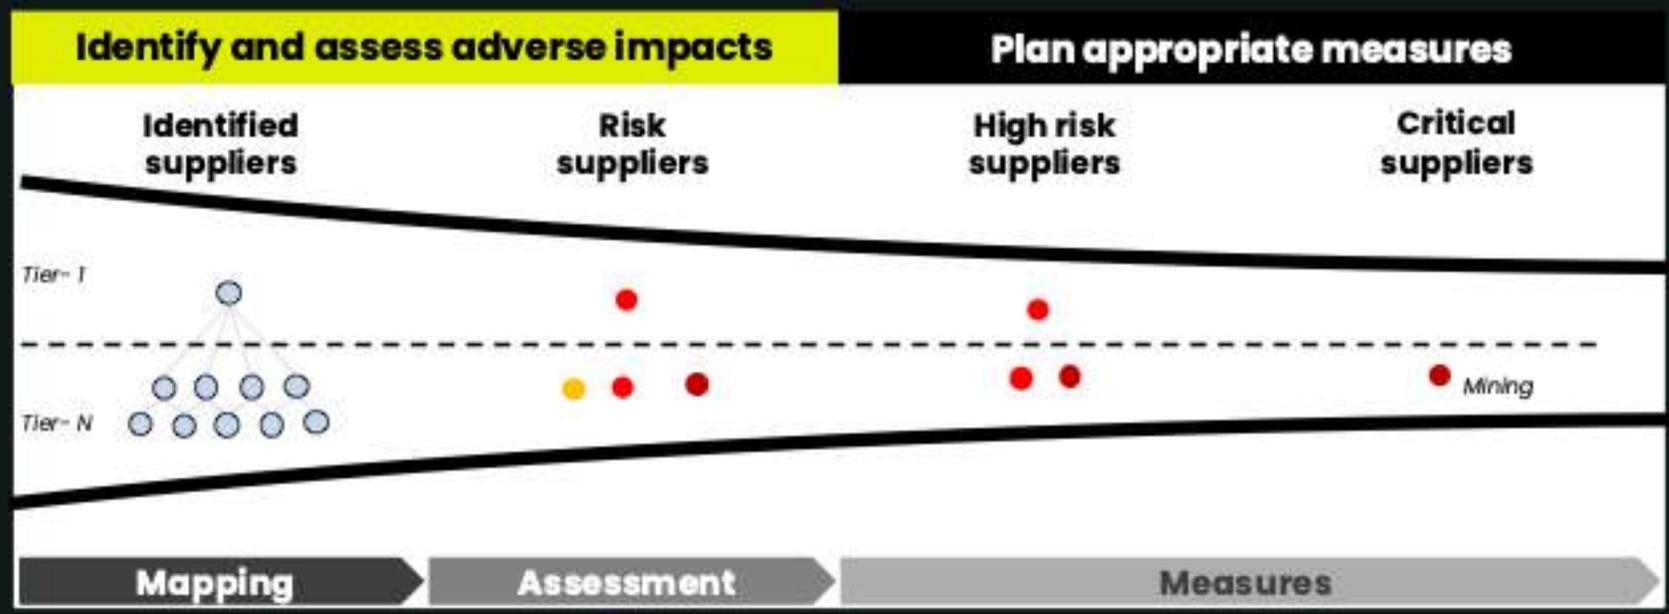

Prowave | Prowave covers risks in over 150 categories – Focusing on specific risks increases efficiency in risk management

Lifecycle sustainability manager

- verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Battery Regulation Risk assessment with Prewave

Multi-tier transparency enabled by **superintelligence**.

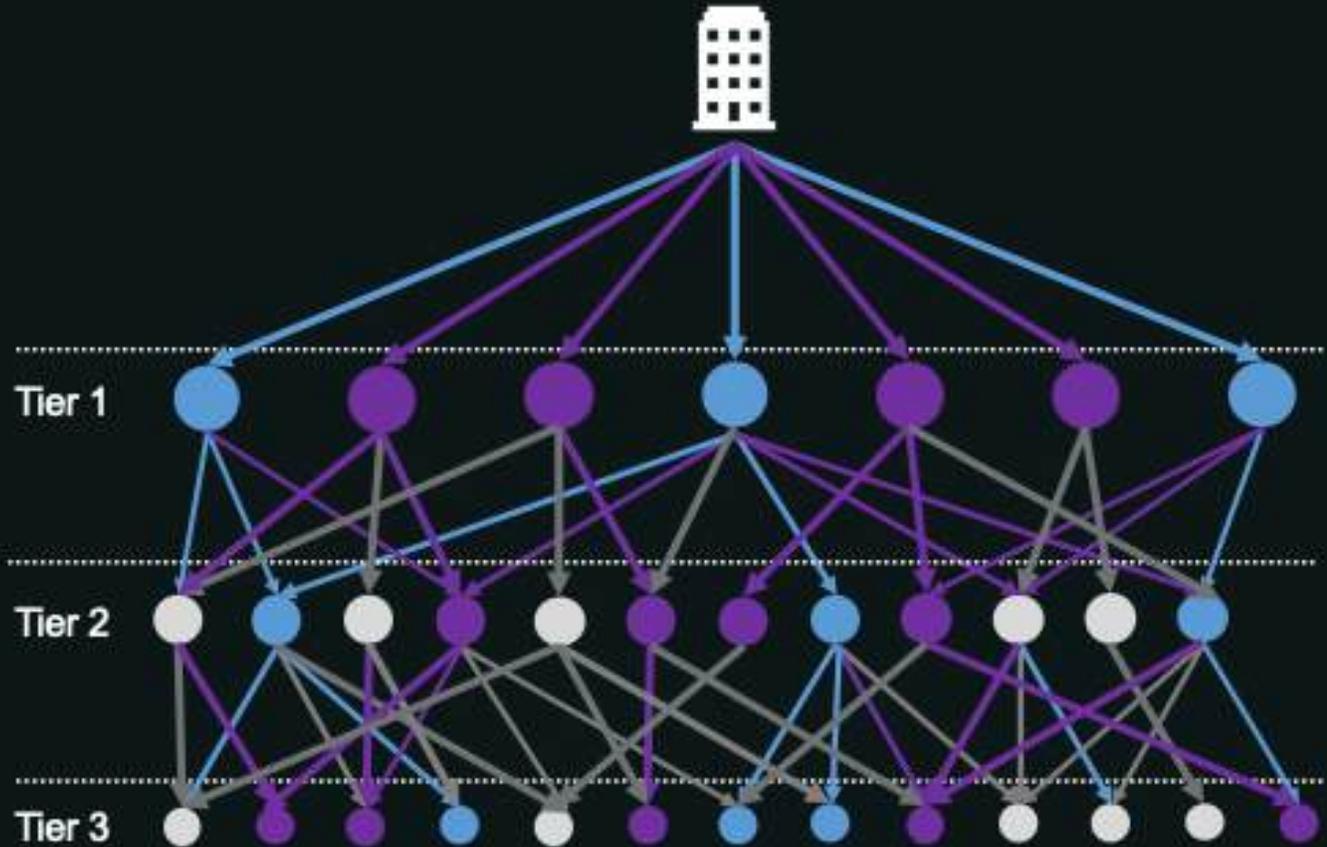

Lifecycle sustainability manager

- verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Customs 
Media 
Predicted 

Enabled by **superintelligence**.

Prowave | Multi-tier transparency analysis

Prowave uses a combination of proprietary AI and a variety of external data sources for its multi-tier transparency analysis to map supply chains beyond direct suppliers (Tier 1) to raw materials. By linking these external sources with a bottom-up approach (starting with 300+ raw materials such as steel, cobalt, or leather), the tool creates transparency across the entire chain.

Key external databases and sources include:

1. Global customs data

Customs data is the backbone of top-down mapping. Prowave analyzes **bill of lading (BOL)** data, for example.

- **Benefits:** Identification of sub-tier suppliers (Tier 2, 3, 4+) as well as the type and quantity of products shipped between them.
- **Scope:** Enables the prediction of supply relationships even when no direct data is available.

2. Public media and news sources

Prowave's AI continuously scans information in over **50 to 120 languages**.

- **Sources:** Local and global news media as well as specialized trade publications.
- **Content:** Early warning signals for over 140 risk categories, including labor unrest, accidents, or fires.

3. Social media and networks

- The platform extracts and combines millions of data points from **social networks** to gain real-time insights into incidents on the ground.

4. Specialized public and regulatory databases

- **Environmental and geodata:** Inclusion of weather data, earthquake reports, and **satellite imagery** (e.g., to verify forest areas for EUDR compliance).
- **Compliance lists:** Comparison with sanctions lists, forced labor lists (e.g., UFLPA), and other regulatory directories.
- **Company registers:** Verification of over one million companies worldwide with regard to regulatory requirements.

5. Supplier and industry data

- Prowave combines the above sources with specific customer and industry data to create a global “supply chain graph” that currently covers over **2.6 million locations** and 10 million supplier relationships.

Illy caffè – Global coffee company

Supplier portal for collecting, summarizing, and analyzing large amounts of data between purchasing and suppliers, including pre-suppliers

=> Focus on transparency and traceability in the supply chain

- › **Supplier portal for prequalification** with specific questions on company organization, geographic reach, financial and operational issues, references, certifications, innovation, ethical and sustainability aspects
- › **Governance & compliance for process traceability** and risk mitigation, **360-degree management of all suppliers**, performance monitoring and improvement, compliance with guidelines and the purchasing process
- › **Transparency** that ensures **ethical behavior** in processes and **access to data** and information
- › Introduction of **common global methods between purchasing and suppliers, standardization** of procedures, **acceleration of** internal and external responses in terms of time spent on the purchasing process, and **continuous improvement** through the **exchange of best practices**
- › **Economic profitability**: Achieving economic benefits through the digitalization of processes and **reduction of total operating costs** in various expense categories

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

› Process automation

› Supplier portal for pre-qualification, evaluation, monitoring, and development

Blockchain-based supply chain visibility (traceability)

2.3

Pattern description

- › Digital solutions use **blockchain technology** to improve **transparency, traceability, and trustworthiness** in supply chains.
- › It creates a **decentralized and immutable ledger** for secure storage and tracking of transactions.
- › By using blockchain technology, **transactions** are **documented in real time** and cannot be changed retrospectively.
- › This enables companies to **seamlessly track** the **status and origin of their products** and minimize fraudulent activity.
- › This can be a decisive advantage, especially in **industries with complex supply chains**, such as the food or electronics industries.

Examples:

Focus:

- › Transparency and authenticity in process automation

Advantages:

- › **Real-time transparency** in the supply chain
- › **Prevention of counterfeiting** and non-certified materials
- › **Greater control** over sustainability standards
- › **Improved responsiveness** to product recalls or compliance issues

* Blockchain technology is a **decentralized, distributed database technology** that enables **transparent and secure recording of transactions**

Unilever – Global consumer goods manufacturer

Achieving a deforestation-free supply chain* by 2023

- › Unilever has been a leader in responsible sourcing practices for over a decade. This includes requiring its suppliers to commit to paying **workers a living wage** and a living income. The latter includes a **commitment** to achieving **a deforestation-free supply chain**.
- › A key step in achieving this is **improving supply chain traceability and transparency**.
- › The company has trialed **technologies such as blockchain for agricultural commodities, satellite monitoring, and geolocation**.
- › In one project, it has partnered with **Descartes Labs*** to create highly **detailed maps of its palm oil plantations**.
- › This information, **combined with other data**, is **quickly processed** and provides procurement teams with **actionable insights** that they can use in **discussions with suppliers**.
- › This **data-driven approach is now being extended to Unilever's entire procurement community** and is actively influencing the design of the sustainable procurement program.

* Deforestation-free supply chains ensure that no forest ecosystems are destroyed for the cultivation of agricultural commodities.

› Blockchain-based supply chain visibility

Walmart is working with IBM Food Trust to build a blockchain-based platform

Description

Walmart has partnered with IBM to adopt a **blockchain* solution** to bring the **complex food system**, which is overcrowded with system solutions that do not communicate well with each other, into a new, sustainable era.

Blockchain technology offers all players in food safety **new methods of collaboration** that lead to **greater efficiency and transparency**.

Different food systems can capture information about the product along its value chain and feed it into the blockchain, where the data can be compared to gain various insights that lead to a more affordable, safer, and cheaper food system.

Walmart believes that **transparency is more important than traceability**, as blockchain not only provides information about **where food comes from**, but also answers questions such as:

- Was the **food produced safely and responsibly**?
- Was the **food grown sustainably**?
- **How many days** does the food have left before it expires?

* Blockchain technology is a **decentralized, distributed database technology** that enables **transparent and secure recording of transactions**.

Circular economy management (lifecycle perspective, downstream supply chain) 2.4

Sample description

- › Digital solutions to **promote the circular economy**.
- › The tools help companies **minimize waste, reuse materials efficiently**, and establish **closed-loop systems**.
- › The platforms enable **detailed analysis of material and resource flows** within the value chain.
- › Focus is on **leveraging secondary material opportunities**
- › They offer companies the opportunity to develop **innovative business models** in line with the circular economy **by implementing strategies to reduce waste and promote recycling**.

IPG ToolMap

Lifecycle sustainability manager

8. **Circular Economy Management/ Waste Reduction**
9. Sustainability Enterprise Management
10. Enterprise ESG Analytics
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Resourcify

Focus:

- › Monitoring of waste and circulating materials
- › Elimination of waste and pollution

Advantages:

- › **Reduction of waste** and conservation of natural resources
- › **Increased resource efficiency** through circular strategies
- › Promotion of **sustainable product design** and material recycling
- › **Improvement of regulatory compliance** in the area of circular economy

Circular economy management (lifecycle perspective, downstream supply chain) 2.4

Primary material

- Material produced from **virgin natural resources**.
- Examples: newly mined iron ore, fresh timber, crude oil used for plastics.
- Characteristics: high environmental impact due to extraction, high energy use, biodiversity loss.

Secondary material

- Material produced from **recovered, recycled, or reclaimed sources**.
- Examples: recycled aluminium, recycled plastics, recovered paper fiber.
- Characteristics: dramatically lower environmental impact—less energy, less waste, and reduced need for new resource extraction.

| Aspect | Primary Material | Secondary Material |
|---------------------------------|---|---|
| Origin | Natural resources (mining, harvesting) | Recycling, reuse, remanufacturing |
| Environmental Impact | High: extraction, energy, pollution | Low: avoids extraction, reduces waste |
| Energy Requirement | Typically high | Typically much lower |
| Examples | New aluminium from bauxite, virgin plastic, mined steel | Recycled aluminium, recycled PET, scrap-based steel |
| Role in Circular Economy | Linear economy | Circular economy cornerstone |

IPG DIGITAL TOOL MAP | Taxonomy - Lifecycle Sustainability Manager – use cases Level 3

Sustainability Enterprise Management (company-wide, internal collaboration)

3.1

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Sample description

- › **Sustainability Enterprise Management Software solutions** that help **plan and manage sustainability activities across the entire enterprise.**
- › This software can offer a variety of features and modules ranging **from carbon management to materiality assessment.**
- › It also features **comprehensive data management and reporting capabilities** that respond in real time to stakeholder requests, meaning that **integrations with SaaS tools and big data visualization** are mandatory for this type of software.

Enterprise ESG Emissions Analytics & Reporting

(ESG emissions measurement, Scope 1-2-3)

3.2

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt Kosten-Nutzen-Analysen für nachhaltige Alternativen

Sample description

- › The **ESG analysis software for companies** automates the **process of calculating emissions**, making it more efficient and less prone to errors.
- › It **collects, cleans, calculates, links, and communicates emissions data**, enabling organizations **to track, analyze, and report on their environmental performance**.
- › **ESG reports** help users build trust and transparency with their stakeholders.

IPG ToolMap

Lifecycle sustainability manager

7. Blockchain-based Supply Chain Visibility
8. Circular Economy Management/ Waste Reduction
9. Sustainability Enterprise Management
10. **Enterprise ESG Analytics**
11. Scope 3 Carbon Management/Product Carbon Footprint Calculation
12. Carbon Compensation & Offsetting

Examples:

Focus:

- › Emissions measurement and identification of improvement potential

Advantages:

- › Track supplier performance
- › Transparency

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

Carbon & Environment Footprint Tracker (CO₂ and environmental footprint tracking)

3.3

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt **Kosten-Nutzen-Analysen** für nachhaltige Alternativen

Sample Description

- › **Carbon & Environment Footprint** software helps **companies seamlessly capture, analyze, and report emissions data across all three areas of the Greenhouse Gas (GHG) Protocol** throughout the supply chain and within the company.
- › Carbon management solutions typically combine **carbon accounting, product carbon footprints (LCA), and supply chain emissions (Scope 3)** into a **single integrated system to centralize complex data streams** and enable flexible **reporting** that opens up greater **decarbonization options**.

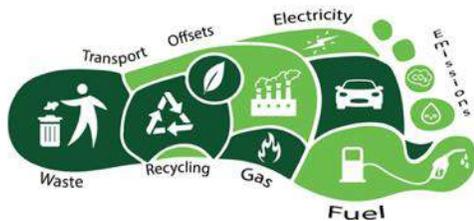

IPG ToolMap

Lifecycle sustainability manager

11. **Scope 3 Carbon Management/Product Carbon Footprint Calculation**
12. Carbon Compensation & Offsetting

Examples:

Focus:

- › Measuring and reducing the environmental impact of procurement activities

Benefits:

- › Transparency regarding a company's environmental impact
- › Support in implementing CO₂ reduction measures
- › Compliance with regulatory requirements and sustainability goals

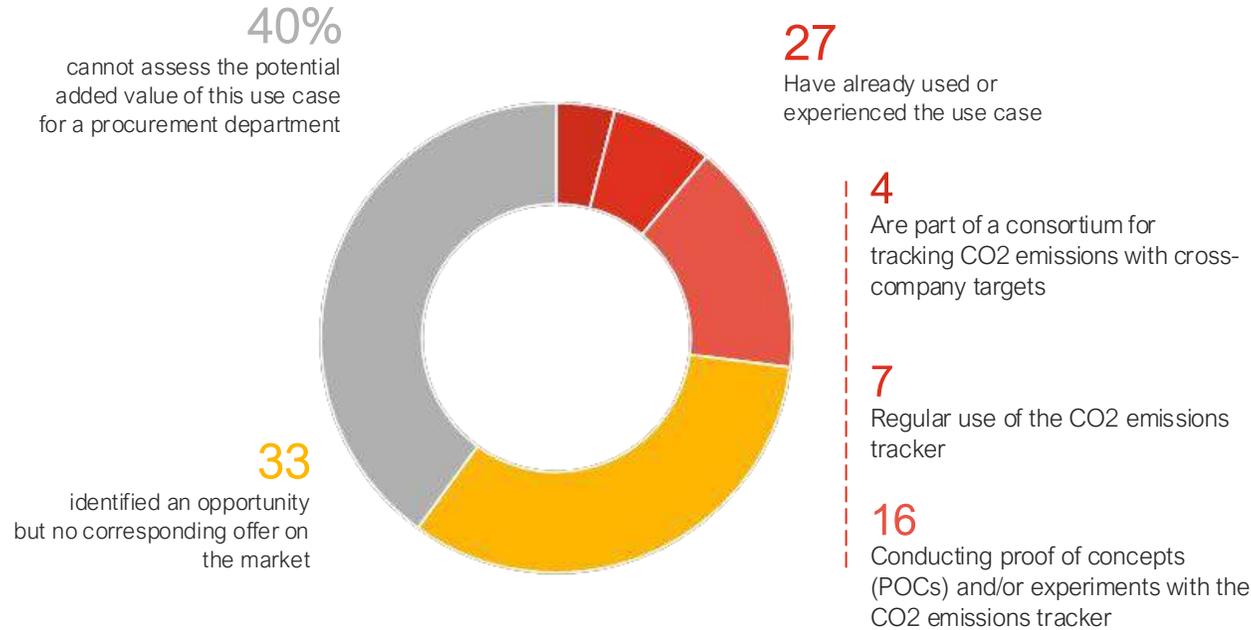

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

The CO2 emissions tracker can be a decisive factor in applying sustainability in purchasing

CPOs' assessment of "CO2 emissions trackers"

Sustainability will be a decisive factor in the future – 27% of companies have already introduced or started to introduce a system for tracking emissions

Tracking CO2 emissions is increasingly becoming a legal and social obligation. Therefore, procurement can play a key role in this initiative

The advantage of tracking suppliers' emissions is recognized, but implementation is lacking due to market availability

Another 30% of respondents are already facing the transition to net zero. However, they lack a structured approach to tackling the problem and need a tool

40% of companies are not (yet) interested in tracking their suppliers' CO2 emissions

Even though sustainability and the tracking of CO2 emissions are widely discussed in industry, the added value often remains unclear, especially in terms of financial savings

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

Olam International – the world's largest supplier of cocoa beans and products, coffee, cotton, and rice

3.3

AtSource was created by Olam Group in 2018 as part of its mission to re-imagine global agriculture and food systems.

Recording the ecological footprint for transparency in their complex supply chains

- › Olam International develops the **Digital Footprint Calculator**, an addition to its sustainable sourcing solution AtSource (a SUSTAINABILITY INSIGHTS PLATFORM)

Solution

Olam's AtSource tool **enables its customers to meet their expectations by providing them with access to information about the causes and types of impacts in their supply chains, tracing them back to the farm level.**

Olam International **wants to integrate environmental sustainability metrics into AtSource and convert this data into environmental impacts**—a major challenge given the scale of Olam's global operations.

Actions

Olam's IT teams are developing the "Digital Footprint Calculator," an **online tool that converts agricultural and processing data into comprehensive insights into environmental impacts.**

To analyze the data, Olam used **LCA (life cycle analysis)-based approaches** and innovative methods to account for the impacts and benefits of agricultural practices.

Results

The integration of the Digital Footprint Calculator into AtSource **makes it the most complete and comprehensive platform for sustainable sourcing in the agriculture and food sector.**

Olam provides its customers with the data they need to identify hotspots and track progress toward their sustainability goals.

› Carbon & Environment Footprint Tracker

› Multidomain Master Data Mgmt.
› Network & Market Data Intelligence

* Life cycle assessment (LCA), also known as life cycle evaluation, is a method for assessing the environmental impact of a product throughout its entire life cycle.

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt **Kosten-Nutzen-Analysen** für nachhaltige Alternativen

New BASF dashboard for sustainable purchasing and for BASF customers

- › BASF offers customers a **new digital application, MyCarbonFootprint**, which provides them with comprehensive insight into the **sustainability status of the BASF product portfolio they have purchased**
- › **Based on the quantities** of a specific product **purchased**, MyCarbonFootprint calculates its CO2 emissions, carbon footprint, and share of renewable raw materials according to individual purchases from BASF, **from** cradle to gate, i.e., from creation to shipment.
- › The app, called "**MyCarbonFootprint**," **helps users** find **suitable products** to achieve sustainability goals in terms of **CO2 reduction** and the use of **renewable raw materials**.
- › The app contains data on over **700 selected products**.

- › As part of a **method test, TÜV Rheinland** has certified that BASF's PCF* calculation solution and methodology is **scientifically sound**, complies with ISO 14067:2018, and reflects the state of the art.

Unilever – Global consumer goods manufacturer

3.3

Lifecycle sustainability manager

- › verbindet zukünftige Umwelt- und Regulierungsanforderungen mit seinem Wissen über das Versorgungsnetz
- › integriert die Nachhaltigkeit in die Kategorie-Strategien und Beschaffungsprozesse
- › übernimmt die Verantwortung für die Bewertung der Nachhaltigkeitsrisiken von Lieferanten und Lieferketten
- › entwickelt **Kosten-Nutzen-Analysen** für nachhaltige Alternativen

Life cycle analysis tools and capabilities to develop decarbonization strategies for net-zero GHG emissions

- › Unilever's procurement teams are involved in **identifying the ingredients and raw materials** that contribute most to **the company's carbon footprint**.
- › Unilever has committed to **a new goal** of reducing the **greenhouse gas emissions** of its products from sourcing to sale **to zero by 2039**
- › **Emissions from raw materials**, including third-party manufactured products, account for **49%** of Unilever's **estimated total annual emissions** of 32 million tons of carbon dioxide equivalent (CO2e)
- › A **six-month pilot project with soda**, which is mainly used in Unilever's home care business, has identified opportunities **to significantly reduce Scope 3 emissions** (those generated outside of its own operations) over a five-year period **by working with procurement, R&D, and key suppliers**

- › Unilever is now using this model, which requires scientific experts, **life cycle assessment** tools, and the application of specialist knowledge, **to develop decarbonization strategies for other materials and ingredients** over the next two years.

› Sustainable supplier risk management

› Carbon & Environment Footprint Tracker

› Circular economy management

CONTENTS INTENDED FOR IPG MASTERCLASS PARTICIPANTS

ERDBÄR – specialist manufacturer of organic products for children and babies

3.3

Scalable life cycle assessment of supply chains and product portfolios

- Due to the large number of suppliers across Europe with different raw materials and production processes, Erdbär developed a **scalable platform** that is capable of **evaluating data from the enterprise resource planning (ERP) system and linking supplier data with databases.**

The solution

Erdbär created a **comprehensive and scalable life cycle assessment model** by mapping its entire supplier structure and flow of goods and collecting and migrating **data along the entire value chain** (Scopes 1, 2, 3).

- This **enabled analysis at both the company and individual product levels.**
- Relevant stakeholders in key functions** at Erdbär were trained, e.g., in
- supply chain management and packaging**, in how to use the software and in its continuous development.

The results

The life cycle assessment developed enables Erdbär **to calculate article-specific carbon footprints for its entire portfolio** for the first time and to derive targeted measures for reducing CO2 emissions.

The **emissions remaining in areas 1 and 2 after the initial optimizations were neutralized through compensation projects.**

The **transparency of the supply chain (Scope 3) also made it possible to gain insights into which suppliers are already nearly climate-neutral** and where there are **opportunities for further reduction and compensation projects.**

Product Carbon Footprint Bericht

Dem auftraggebenden Unternehmen wird bestätigt, dass die Berechnung der CO₂-Emissionen gemäß dem Verfahren für das Produkt-Produkt Life Cycle Accounting and Reporting Standard (GHG Protocol) und der ISO 14067 durchgeführt wurde – mit geprüfter Berechnungsmethode durch TÜV SÜD.

Demo Produkte
Befüllungsanlage
162.916,02 kg CO₂e

emissionen 1,02 kg CO₂e/kg des Produktes

Der Berechnung liegt eine detaillierte DDC-Daten zugrunde, die bei möglicher Nutzung mit Primärdaten, anderweitig mit Sekundärdaten dargestellt wurden. Die zugrundeliegenden Emissionsfaktoren stammen aus wissenschaftlich anerkannten Datenbanken sowie Daten von Referenzprodukten. Es wurden alle relevanten Treibhausgase betrachtet, für eine bessere Vergleichbarkeit wurde jedoch mit CO₂-Äquivalenten gerechnet (GWP100).

Berechnungsmethode: Activity-based nach GHG Protocol und ISO 14067
Systemgrenzen: Cradle-to-Gate
Emissionskategorien: Direkte Emissionen (Scope 1) Indirekte Emissionen (Scope 2), Eingekaufte Waren (Scope 3, 3.1, 3.3, 3.4, 3.5), Upstream Logistik (Scope 3, 4), Abfall (Scope 3, 5)

Berechnung erstellt am: 25.3.2025

Tool prioritization & selection

Step 1: Prioritize

- Outline what you consider to be the three most important digital tools for sustainable purchasing and justify your selection.

Step 2: Timing

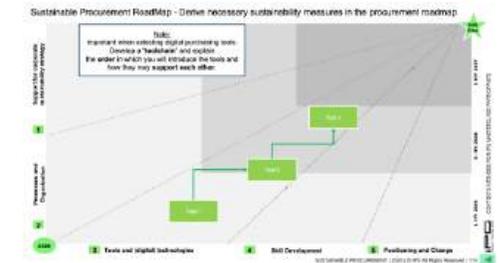

- In what order would you introduce the three selected tools into your purchasing department?

Step 3: Business & Benefit case

- Outline the business & benefit case for the first tool you plan to introduce.

Step 4: Projectplan / RoadMap

- Derive the necessary sustainability projects and task packages and locate them in your purchasing roadmap.

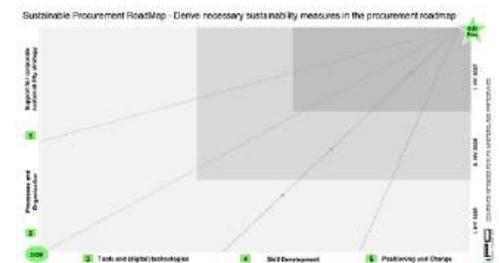

DRIVING PURCHASING OF THE FUTURE - SOCIAL TOOL-BASED USE CASES

Business & Benefit case | Added value of digital (AI) solutions for purchasing and SCM

| Use case | Efficiency gains | Savings (commercial benefits) | Compliance & risk avoidance | Benefits for people | Total benefit |
|------------------|---|---|---|---|--|
| Focus on... | Time/process effects | Monetary effects (cost reduction & cost avoidance) | Avoidance of delivery interruptions, damage to image, etc. | Motivation and mobilization gains | Overall effects |
| Use case Example | Time savings <ul style="list-style-type: none"> • Use for higher-value activities • Use for previously neglected activities Zeitersparnis | <ul style="list-style-type: none"> • Additional savings in procurement • Lower TCO • Greater flexibility • Avoidance of CO2 taxes and penalties for non-sustainability • Predictive forecasting of price increases for raw materials • Growth drivers: increases in sales and profits | Identification of sustainability risks in the supply chain Predictive forecasting of supply bottlenecks, droughts, and natural disasters | <ul style="list-style-type: none"> • Increased self-efficacy • Professional development • Better job • Motivation to succeed • Reduction of anxiety/stress | Cost savings relevant to the income statement plus non-financial gains or benefits |
| Herleitung | Time saved = Process volume X Time saved per run X Cost/time unit | Commercial profit = affected external expenditure X Cost reduction caused by AI | Risk avoidance = Reducing the probability of risks occurring X monetary impact of risk | Motivational gains = e.g., development of employee satisfaction scores, absenteeism, sick leave, turnover rate, unsolicited applications, etc. | Total of all components |

$$ROI = (\text{efficiency gains} + \text{savings} + \text{risk avoidance} + \text{gains for people} - \text{investment costs}) / \text{investment costs}$$

Sustainable Procurement RoadMap - Derive necessary sustainability measures in the procurement roadmap

Tool prioritization for sustainable purchasing

Critical areas of development | Our latest analysis reveals eight future skills that are critical to the success of digital procurement.

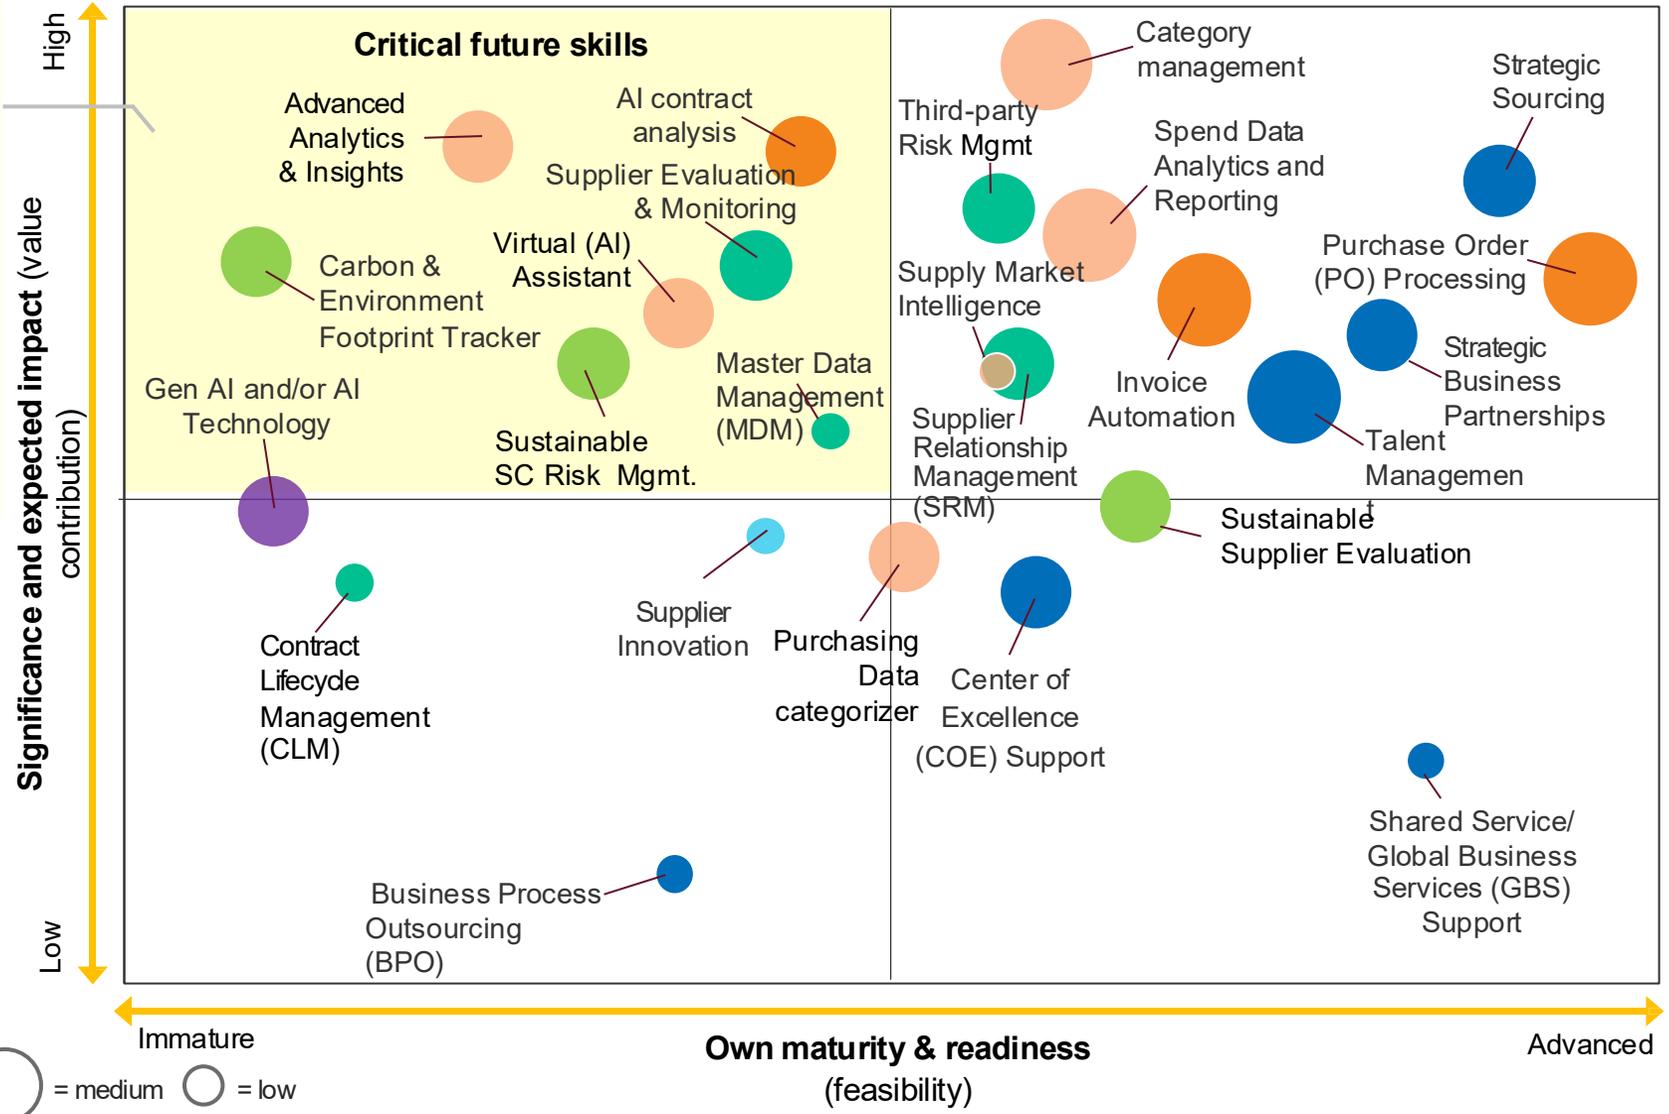

› Critical development areas represent initiatives and digital (AI) tool priorities that are **highly significant** (in terms of impact or added value) and at the same time **have a low maturity level** within the company's own purchasing department for implementation.

› They are therefore **critical areas for the development of future digital purchasing skills and capabilities.**

- Category efficiency leader (strategic purchasing)
- Transactional champion (operational-tactical purchasing)
- Lifecycle sustainability manager
- Supplier & SC tower
- Innovation partner manager
- Digital transformation (general)
- Organization design and service partnering

Circle size indicates the number of organizations focusing on the respective topic

○ = high ○ = medium ○ = low

Business & Benefit case | Added value of digital (AI) solutions for purchasing and SCM

| Use case | Efficiency gains | Savings (commercial benefits) | Compliance & risk avoidance | Benefits for people | Total benefit |
|------------------|---|---|---|---|--|
| Focus on... | Time/process effects | Monetary effects (cost reduction & cost avoidance) | Avoidance of delivery interruptions, damage to image, etc. | Motivation and mobilization gains | Overall effects |
| Use case Example | Time savings <ul style="list-style-type: none"> • Use for higher-value activities • Use for previously neglected activities Zeitersparnis | <ul style="list-style-type: none"> • Additional savings in procurement • Lower TCO • Greater flexibility • Avoidance of CO2 taxes and penalties for non-sustainability • Predictive forecasting of price increases for raw materials • Growth drivers: increases in sales and profits | Identification of sustainability risks in the supply chain Predictive forecasting of supply bottlenecks, droughts, and natural disasters | <ul style="list-style-type: none"> • Increased self-efficacy • Professional development • Better job • Motivation to succeed • Reduction of anxiety/stress | Cost savings relevant to the income statement plus non-financial gains or benefits |
